# 1 Overview

In this session you will:

- Tag, log in, and push your image to Docker Hub.
- Convert the Docker image into an Apptainer `.sif` file.
- Transfer the `.sif` file to KUACC.
- Bind KUACC directories into the container.
- Run ANGSD/PCAngsd inside Apptainer interactively.

## 2 Tag, log in, and push to Docker Hub

We assume you have a local image:

```
docker images
```

Example:

REPOSITORY	TAG	IMAGE ID	CREATED	SIZE
isophya-course	0.1	8c0a92d3f0a2	12 hours ago	6.3GB

### 2.1 Log in to Docker Hub

```
docker login -u iksaglam
```

When prompted, use a Personal Access Token (PAT) with read/write scope.

Verify:

```
docker info | grep Username
```

### 2.2 Tag the image

```
docker tag isophya-course:0.1 iksaglam/isophya-course:0.1
```

### 2.3 Push the image

```
docker push iksaglam/isophya-course:0.1
```

Anyone can later run:

```
docker pull iksaglam/isophya-course:0.1
```

### 3 Build the Apptainer image locally

On your laptop (with Apptainer installed):

```
apptainer build isophya-course_0.1.sif \  
docker://iksaglam/isophya-course:0.1
```

This produces:

```
ls -lh isophya-course_0.1.sif
```

### 4 Transfer the .sif file to KUACC

```
scp isophya-course_0.1.sif \  
iksaglam@login.kuacc.ku.edu.tr:~/oulu/
```

On KUACC:

```
ssh iksaglam@login.kuacc.ku.edu.tr  
cd ~/oulu  
ls -lh isophya-course_0.1.sif
```

### 5 Create runtime directories on KUACC

Inside ~/oulu:

```
mkdir -p ~/oulu/data  
mkdir -p ~/oulu/results  
mkdir -p ~/oulu/scripts
```

Place into:

- ~/oulu/data: .bamlist, .sites, .chr, .info, .clst, etc.
- ~/oulu/results: empty directory for outputs.
- ~/oulu/scripts: copies of 01\_call\_genotypes.sh, 02\_pcangsd\_pipeline.sh, pcadapt.R, plotPCA.R, plotAdmix.R.

Large data remain where they already live:

```
/userfiles/utopalan22/isophya/new_bams  
/userfiles/utopalan22/isophya/references
```

### 6 Binding layout inside the container

We choose:

Host path	Container path	Use
~/oulu/data	/data	metadata, lists, filters
/userfiles/.../new_bams	/data/bams	BAMs (large)
/userfiles/.../references	/data/ref	reference genome
~/oulu/results	/results	outputs
~/oulu/scripts	/workspace/scripts	scripts

This matches the defaults in your scripts, for example:

```
REF="${REF:-/data/ref/isophya_contigs_CAYMY.fasta}"
```

## 7 Inspect and run Apptainer on KUACC

### 7.1 Inspect the image

```
cd ~/oulu
module load apptainer/1.4.1

apptainer inspect isophya-course_0.1.sif
```

### 7.2 Test bindings interactively

```
apptainer exec \
  --bind ~/oulu/data:/data:ro \
  --bind /userfiles/utopalan22/isophya/new_bams:/data/bams:ro \
  --bind /userfiles/utopalan22/isophya/references:/data/ref:ro \
  --bind ~/oulu/results:/results \
  --bind ~/oulu/scripts:/workspace/scripts:ro \
  isophya-course_0.1.sif \
  bash -lc 'ls /data; ls /data/bams | head; ls /data/ref; ls /workspace/scripts'
```

If this lists the expected files, your bindings are correct.

### 7.3 Interactive shell

```
apptainer shell \
  --bind ~/oulu/data:/data:ro \
  --bind /userfiles/utopalan22/isophya/new_bams:/data/bams:ro \
  --bind /userfiles/utopalan22/isophya/references:/data/ref:ro \
  --bind ~/oulu/results:/results \
  --bind ~/oulu/scripts:/workspace/scripts:ro \
  --pwd /workspace \
  isophya-course_0.1.sif
```

Inside:

```
angsd -h
python -m pcangsd -h
ls /data
```

```
ls /results
```

---

## 8 Run full pipelines interactively

### 8.1 ANGSD genotype calling

```
cd ~/oulu

apptainer exec \
  --bind ~/oulu/data:/data:ro \
  --bind /userfiles/utopalan22/isophya/new_bams:/data/bams:ro \
  --bind /userfiles/utopalan22/isophya/references:/data/ref:ro \
  --bind ~/oulu/results:/results \
  --bind ~/oulu/scripts:/workspace/scripts:ro \
  --pwd /workspace \
  isophya-course_0.1.sif \
  bash -lc './scripts/01_call_genotypes.sh'
```

---

### 8.2 PCAngsd + selection pipeline

```
cd ~/oulu

apptainer exec \
  --bind ~/oulu/data:/data:ro \
  --bind /userfiles/utopalan22/isophya/new_bams:/data/bams:ro \
  --bind /userfiles/utopalan22/isophya/references:/data/ref:ro \
  --bind ~/oulu/results:/results \
  --bind ~/oulu/scripts:/workspace/scripts:ro \
  --pwd /workspace \
  isophya-course_0.1.sif \
  bash -lc './scripts/02_pclangsd_pipeline.sh'
```

---

## 9 Summary

After Session 3 you can:

- Publish your image on Docker Hub.
- Build a portable Apptainer `.sif` file.
- Bind KUACC directories into the container.
- Run your ANGSD and PCAngsd workflows interactively on the cluster.
